

A black and white photograph of an offshore wind farm. Numerous wind turbines are visible in the distance across a calm sea. In the foreground, a support vessel is moving from right to left, leaving a wake. The image is framed by large, overlapping geometric shapes in shades of blue and grey.

LOGISTICS SUPPORT & VESSEL MANAGEMENT

LOGISTICS SUPPORT & VESSEL MANAGEMENT

15+

With over 15 years' experience in logistics support and vessel management, we take the hassle out of your project.

Our dedicated, highly qualified team have a diverse background, enabling us to offer 360° support.

We mobilise quickly, offering flexible onsite support, worldwide, at short notice.

SERVICE REVIEW

OOL works in collaboration with our sister company, Colebrook Offshore, a specialist renewables shipbroker active across the global market spanning the complete vessel lifecycle between construction to O&M and decommissioning.

- We offer charter support from initial requirement to contract commencement as well as ongoing charter support and management of the vessels on projects including handling all audits, harbor dues etc.
- We have a first-hand experience running a variety of projects offshore and this has formed our understanding that seamless vessel operations are pivotable to success.
- We have an extensive track record of providing the most attractive commercial offer for the most suitable asset spread, coupled with first-rate operational management and project support. We remove the burden and bring an optimised solution to your project.

VESSEL PROCUREMENT

During the initial stages of a requirement, Colebrook Offshore will lead the commercial approach to market on an exclusive basis. At this stage, the project will be assigned a dedicated chartering manager to oversee the vessel procurement process on your behalf.

Also, to ensure you are fully informed of the market status, you will be provided with monthly CTV (currently North/Baltic Sea, Taiwan and USA) and W2W (currently North/Baltic Sea) reports, as well as a yearly market forecast report covering CTVs, W2W & Heavy Lift.

When there are requirements for support for either tendering or an immediate vessel requirement, both the assigned chartering manager and the operational support from OOL will work alongside your team to ensure we understand your requirement both commercially and operationally.

COMMERCIALLY

We ensure a full understanding of the duration, budget and contractual requirements to ensure offers presented are suitable.

OPERATIONALLY

We ensure complete knowledge of all operational requirements from cargo to pax and fuel consumption. We ensure that the vessels are suitable for the intended port of operation and can fulfil all duties, by only working with operators that are well known and trusted within the market.

We pride ourselves on our open, reliable and transparent approach. During every stage of the process you have complete oversight of correspondence in a fully auditable system.

OOL follows a tried and tested process, offering the most agile operational management and support service to our clients during some of the most complex offshore logistic operations.

For the daily operational management, a Marine Logistics Manager will be appointed to the project and their responsibilities are as below;

- Responsible for daily meetings with the site operations team and planning support.
- Management of all audit processes and close out.
- Monthly reporting to the project team.
- Daily progress report and management.
- Liaison from end client, charterer and owner.
- Act as technical and maritime guidance for the charterer.
- Monitor and have oversight on vessel documents and certification.
- Organise stores, fuel, port dues and other services as requested by the charterer for the support of their project or end client.
- Monitor and audit vessel performance to ensure it meets the charterer's contracted requirements.
